Hello miss Ilayda and Mohanad hoca
In this video, I will demonstrate my Python project, Student Grade Manager, in this video.
This application uses Python file handling to maintain a list of students and their grades.
In addition to calculating the class average, it enables us to display, add, remove, and update students.
Let me now go over each section in detail.

I apologize for the length of the video—it's over 5 minutes. For everyone's convenience, I've pushed the code on GitHub. Here's a link to my repository:
copy of my code

I hope my voice sounds good without background noise.
